2017 - 2018

The Nebraska Crop Improvement Association is dedicated to enhancing the economic viability and well-being of the people of Nebraska and the world, through value-added products and processes.

We will achieve this goal through an organizational structure which attracts the finest people, fully develops and challenges individual talents, encourages industry-wide collaboration to advance agriculture, and maintains the Association's historic principles of integrity.

OFFICERS

Ryan Peters, McCook President (State-at-Large)
 Harlan Husa, Hebron Vice President (District 2)
 Emery Fox, Crawford Treasurer (District 4)

DIRECTORS

Andre Hoyt, Omaha District 1
 Rick Dunbar, Eustis District 3
 Chris Cullan, Hemingford State-at-Large
 Joel Maschmann, Deshler State-at-Large
 Dennis Bracht, Fremont Seed Trade Representative
 Roch Gaussoin, Lincoln Agronomy Representative
 Vacant IANR-UNL Representative

STAFF

Steve Knox Secretary-Manager
 Diane Brestel Administrative Assistant
 Steve Pageler Assistant Manager
 Lynn Robinson Lab Supervisor

The purpose of this directory is to provide crop producers, decision makers and the seed industry with a reference to seed sources in Nebraska.

This seed book includes those members whose fields were planted with eligible seed stocks and whose applications for field inspection were received by the publication date.

Inquiries about seed supplies and prices should be directed to the growers and/or seed enterprises listed, not to the Nebraska Crop Improvement Association.

In no case is the seed listed in this seed book yet **CERTIFIED**, for it must be conditioned, tested in the laboratory, and labeled with the official certification tag or bulk sale certificate before it can be offered for sale as Certified Quality Seed.

Seed producers, conditioners, and distributors voluntarily use the seed certification process to assure their customers that extra care has been taken to provide them with correctly identified, genetically pure seed. The **CERTIFIED SEED** label identifies seed meeting quality requirements and assures the buyer of obtaining reliable performance of the variety named on the label.

Each member is responsible for handling certifiable seed so it will also meet the Nebraska Certification Standards for physical purity and germination. The Nebraska Seed Law requires **EACH** container of seed be labeled as to its origin, the germination percentage and date of test, the percentage by weight of pure seed, other crop seed, weed seed, and inert matter. By studying the **CERTIFIED LABEL**, a buyer can determine the quality of the seed. If Certified seed is purchased in the bulk, each sale is accompanied by an official Retail Bulk Sale Certificate, which includes the same information as a label.

Orders for Certified seed may be accepted by the listed growers, approved conditioners, and authorized distributors only with the understanding that they will be filled if and when **ALL** the certification requirements are completed.

**PLANT VARIETY PROTECTION ACT
HOW IT BENEFITS YOU!**

- Any varieties listed in this publication under the Plant Variety Protection Act will be marked with the **PVP** logo.
- It takes up to ten years to develop a new variety. PVP encourages plant breeding research to produce even better varieties for tomorrow. Without PVP, plant breeders could not afford to invest capital into new varieties and would not be interested in breeding improved varieties.
- Most protected varieties can only be sold as certified quality seed. This helps ensure that the seed buyer gets the variety exactly as the breeder intended it to be.
- The use of certified quality, genetically pure seed allows the complementary varieties you've chosen to make the most of the growing environment.
- The Department of Agriculture is responsible for enforcement of Plant Variety Protection violations in Nebraska. Private seed companies are authorized to take appropriate legal action. Contact the Department of Agriculture (402-471-2394) for more information about your rights and responsibilities with PVP varieties.

Notice to Buyer: Exclusion of Warranties and Limitations of Damages

Seed bearing authorized Nebraska Certified Quality labels has met the minimum requirements outlined in the current edition of the *Nebraska Seed Certification Standards*. The seed certification process relies upon samples and records provided by members/applicants which are beyond the control of the certifying agency. Therefore, the Nebraska Crop Improvement Association *makes no warranties, expressed or implied, including warranty of merchantability, or fitness for a particular purpose concerning certified seed and hereby expressly disclaims the same*. In no event shall the Nebraska Crop Improvement Association be responsible for *damages, actual, incidental, or consequential*, regarding certified seed provided by applicants/members and/or vendors. However, complaints addressed to the the Nebraska Crop Improvement Association will be

WHEAT VARIETY SELECTION & COMPLEMENTATION

Because there is no single perfect variety, using complementation enables you to offset the potential weaknesses (production limitations) found in each variety with the strengths of others. This compensation improves the opportunity for yield stability and profitability of your entire wheat production system.

The number of complementary varieties you grow or the acres to be planted to each variety will depend entirely on your production conditions and special needs. There are four simple steps in using the variety complementation strategy.

1. **Identify your workhorse varieties**-These are the varieties now being grown on a majority of your acres with a reliable and proven record of performance over a period of years.
2. **Complement production needs and limits** - Select varieties that have useful characteristics needed for your specific production practices, soil conditions, and offer the best protection from diseases and other yield limiting factors common to your growing area.
3. **Complement with a range of maturities** - Select varieties that mature earlier or later than your workhorse variety, because some years may favor early varieties and some may favor later varieties. A spread of maturities will also allow you to stagger your harvest and take maximum advantage of your equipment and reduce potential losses to weathering, etc.
4. **Complement with different genetics** - Select varieties that share 50% or less similar parentage to your workhorse variety and each other. Varieties with similar genetic backgrounds can often be susceptible to the same disease and production risks.

HARD RED WINTER WHEAT

PVP ALLIANCE - Alliance is a moderately early maturing, moderately short height variety best adapted to dryland production. It has fair to good winterhardiness, short coleoptile, very good tillering ability, moderately strong straw, and good milling/baking qualities. It was developed by Nebraska and the USDA-ARS from the cross Arkan/Colt//Chisholm sib. U.S. Protected Variety (PVPA 1994). Certificate No. 9400264. Alliance can only be sold as a class of certified seed.

Perkins	McArtor Certified Seed*	Grant	308-352-2361		

PVP AgriPro brand AP503 CL2 - AP503 CL2 is an awned, white chaffed, medium maturing, semidwarf with excellent straw strength. It has good winterhardiness and very good milling and baking qualities. AP503 CL2 has moderate resistance to leaf and stripe rusts and is susceptible to Hessian fly. AP503 CL2 contains two genes that confers tolerance to the BASF herbicide Beyond and is a wheat to be used as a component of the BASF CLEARFIELD Production System. **The Stewardship Program requires the grower must purchase Certified AP503 CL2 wheat seed and must agree not to save seed for planting.** Any unauthorized planting of the AP503 CL2 variety will be punishable under the U.S. Patent law. It was developed, produced, and marketed exclusively under the AgriPro brand name. U.S. Protected Variety (PVPA 1994). Certificate No. 200800322. AP503 CL2 can only be sold as a class of certified seed.

PVP BRAWL CL Plus - Brawl CL Plus is an awned, white-glumed, hard red winter wheat. It is medium-tall, early maturing and has excellent straw strength. It has a medium-long coleoptile and has excellent straw strength, test weight, and baking and milling qualities. Brawl CL Plus has moderate resistance to stripe rust, wheat soilborne mosaic Virus, and powdery mildew. It was selected from the three-way cross Teal 11A/Above//CO99314. Brawl CL Plus was developed by the Colorado Agricultural Experiment Station. The **non-transgenic** herbicide tolerance in Brawl CL Plus was developed by BASF. **It is a wheat to be used as a component of the BASF CLEARFIELD Production System.** This system is designed to control weeds like downy brome, jointed goatgrass, and feral rye and other broadleaf and grassy weeds. It carries two genes for tolerance which serves to enhance both crop safety and weed control. The CLEARFIELD Production System will include a stewardship program that will help maintain the stability of the system. **This means the grower must purchase Certified Brawl CL Plus wheat seed and must agree not to save seed for planting.** Any unauthorized planting of the Brawl CL Plus variety will be punishable under the U.S. Patent law. Brawl CL Plus is available in Nebraska from NuPride Genetics Network Affiliates. U.S. Protected Variety (PVPA 1994). Certificate No. 201200434.

PVP BYRD - Byrd is an awned, white-glumed, variety released by the Colorado Agricultural Experiment Station. It is medium-height with good straw strength that is medium maturing with intermediate coleoptile length. Straw strength is average to above average with severe lodging only occurring under extremely high yielding irrigated conditions. Byrd is moderately resistant to stripe rust and resistant to stem rust and its derivatives. It is moderately resistant to Powdery Mildew and moderately susceptible to leaf rust and US races of stem rust. Byrd is moderately susceptible to wheat streak mosaic virus and barley yellow dwarf virus and susceptible to Hessian Fly. U.S. Protected Variety (PVPA 1994). Certificate No. 2012004342. Byrd can only be sold as a class of certified seed.

PVP NuPride Genetics Network brand CAMELOT - Camelot is a hard red winter wheat cultivar selected from the cross KS91H184/Arlin Sib//KS91HW29/3/NE91631/4/VBF0168. Camelot is a medium late maturing semidwarf wheat with a plant height similar to Millennium. Camelot has good straw strength and good winterhardness. Camelot is moderately resistant to stem, leaf, stripe rust, and Hessian fly. It is also slightly more tolerant to Fusarium head blight (scab). It is moderately susceptible to wheat soil borne mosaic virus and susceptible to barley yellow dwarf virus and wheat streak mosaic virus. Camelot was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. It will be marketed by NuPride Genetic Network. Non-complementary varieties include Hatcher and 2137. U.S. Protected Variety (PVPA 1994). Certificate No. 200900314. Camelot can only be sold as a class of certified seed.

PVP Husker Genetics PANHANDLE brand (NE05548) - Husker Genetics Brand Panhandle is an awned, ivory-glumed semi-dwarf wheat with a short coleoptile, phenotypically; however, it is a tall wheat that possesses good yield potential and straw strength. It is moderately late in maturity, similar to Overland, and height is approximately 1 inch shorter than Goodstreak. Panhandle is resistant to soilborne wheat mosaic virus and stem rust. It is moderately susceptible to leaf rust and stripe rust and susceptible to barley yellow dwarf virus and wheat streak mosaic virus. It was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. Panhandle was selected from the cross NE97426/NE98574 where the pedigree of NE97426 is BRIGANTINA/2*ARAPAHOE and the pedigree of NE98574 is CO850267/RAWHIDE. U.S. Protected Variety (PVPA 1994). Certificate No. 201400410. Panhandle can only be sold as a class of certified seed.

PVP Husker Genetics ROBIDOUX Brand (NI04421) - Husker Genetics Robidoux brand NI04421 was co-developed by the University of Nebraska and the USDA-ARS. Robidoux was selected from the cross NE96644\Wahoo (sib) where the pedigree of NE96644 is Odesskaya P/ Cody//Pavon 76/*3 Scoul66 using a modified bulk breeding method. Robidoux is moderately late in maturity and is best adapted to western rainfed areas where drought is common and irrigated production sites. It is moderately resistant to stripe rust and moderately resistant to moderately susceptible to stem rust. It is moderately susceptible to leaf rust. It is susceptible to Hessian fly and wheat streak mosaic virus and is susceptible to common bunt. Non-complementary varieties include Millennium and Wahoo. U.S. Protected Variety (PVPA 1994). Certificate No. 201100398. Robidoux can only be sold as a class of certified seed.

Husker Genetics RUTH Brand (NE10589) - Husker Genetics Ruth brand (NE10589) is awned, tan glumed cultivar that is moderately late in maturity. It is a semi-dwarf variety that is approximately 33 inches in height. It has moderate straw strength and good winter hardiness. Ruth is resistant to Soilborne wheat mosaic virus and moderately resistant to stem rust, moderately susceptible to leaf rust, and stripe rust. It is moderately susceptible to Fusarium head blight and moderately resistant to moderately susceptible to Hessian fly. It is susceptible to barley yellow dwarf virus and wheat streak mosaic virus. It was developed cooperatively by the Nebraska Agricultural Experiment Station and the USDA-ARS. It was selected from the cross OK98697/Jagalene//Camelot where the pedigree of OK98697 is TAM200/HBB313E//2158. PVPA

NCIA Seed Laboratory

NCIA is the only **Official** AOSA Seed Testing Laboratory in Nebraska. NCIA's laboratory offers rapid turn-around of your samples and reliable results.

Seed Testing Services include: Purity Analysis, Germinations, AOSA or ISTA methods, Tetrazolium Viability, Vigor Assessments, Herbicide Resistance testing, Treated Seed Evaluation, Moisture, Seed Counts, Test Wt, and Seed Identifications. We also offer online results of your seed test. Check out the NCIA website for more information on services and prices. www.necrop.org

PVP Husker Genetics SETTLER CL brand (NH03614 CL) - Husker Genetics Settler CL Brand is a moderately late maturing, semi-dwarf hard red winter wheat selected from the cross Wesley sib//Millennium sib/Above sib. The mature plant height of Settler CL is shorter than Harding and taller than Wesley. Settler CL is an awned, ivory-glumed cultivar with moderate straw strength, less than Wesley and superior to Infinity CL. The winter hardiness is good to very good. Settler CL is moderately resistant to stem rust and wheat soilborne mosaic virus. It is moderately susceptible to leaf rust, stripe rust, and Hessian fly. Settler CL also is slightly less susceptible to Fusarium head blight than many widely grown lines. It is susceptible to wheat streak mosaic virus. Settler CL was developed and released by the University of Nebraska Agricultural Experiment Station. **The Stewardship Program requires the grower must purchase Certified Settler CL wheat seed and must agree not to save seed for planting.** Any unauthorized planting of the Settler CL variety will be punishable under the U.S. Patent law. Settler CL is available from NuPride Genetics Network Affiliates. U.S. Protected Variety (PVPA 1994). Certificate No. 200900104. Settler can only be sold as a class of certified seed.

PVP SNOWMASS - Snowmass is an awned, white-glumed, hard white winter wheat. Snowmass has medium maturity and medium tall height. Coleoptile length is similar to Hatcher. Straw strength is less than average, adequate for limited irrigation or dryland production. Snowmass has good winterhardness and is moderately resistant to leaf rust and stem rust. Reaction of Snowmass is moderately susceptible stripe rust and has moderate resistance to pre-harvest sprouting, similar to Hatcher, Trego and Avalanche. Snowmass has excellent test weight and excellent milling and baking quality. Snowmass is the Ultragrain Premium Program which pays growers a premium to grow the variety. Participants in the program will need to sign a Grain Pricing Schedule with ConAgra Grain Processing Company detailing the contract terms - and a Wheat Seed Agreement with CWRP that requires planting of certified seed and the delivery of all production to ConAgra. Snowmass was released by Colorado State University in 2009, and is marketed by the Colorado Wheat Research Foundation, U.S. Protected Variety (PVPA 1994). Certificate No.2010000432. Snowmass can only be sold as a class of certified seed.

¹ U.S. Plant Variety Protection: N = not protected, P = protected variety, P-94 = protected under the revised PVP Act of 1994, A-94 = applied for or protected under the revised PVP Act of 1994.

² Actual height, bushel weight, and protein content will vary widely with season, location, and production conditions.
 General bushel weight ratings: very good = 62-60 lb/bu, good = 60-58 lb/bu, fair = 58 lb/bu.
 General height ratings (in optimum moisture) = short = 30-35", medium = 35-40", tall = 40-45"

³ R = resistant, S= susceptible, MT= moderately tolerant, LT = low tolerance, MR= moderately resistant, MS = moderately susceptible

OATS

PVP 234 - Proleaf 234 Oats is a leafy forage oat that has excellent forage quality and yield. It is a medium maturity oat with very good disease resistance. U.S. Protected Variety (PVPA 1994). Certificate No. 201500294.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Perkins	Steve Tucker Farms	Venango	308-289-4853		25

PVP GOLIATH - Goliath is a multi-purpose oat that may be used for forage, grain production, and straw. It has excellent straw strength; however, it should not be planted on very high fertility soils unless it will be harvested for forage. It is 4.3 inches taller than Stallion and 1.7 days later in maturity. It also has an excellent disease resistance package with resistance to crown rust, stem rust, barley yellow dwarf virus, and smut. It has a very high groat percentage with an average protein content. U.S. Protected Variety (PVPA 1994). Certificate No. 201300369.

PVP HAYDEN - Hayden is a white-hulled medium-late maturing variety with excellent yield potential and high test weight developed by South Dakota AEC. It ranked first for yield in the 2013 and 2014 CPT trials in South Dakota. It is resistant to smut, moderately resistant to barley yellow dwarf virus and moderately susceptible to crown and stem rust. It has a pedigree of Buckskin//ND011054/SD020835. U.S. Protected Variety (PVPA 1994). Certificate No. 201600054. Hayden can only be sold as a class of certified seed.

TURFGRASSES

Buffalograss is a long-lived, sod-forming, native warm-season perennial grass which reproduces by seed and spreads vegetatively by stolons. It is very suitable for use under low to medium maintenance as an ecologically sound and energy efficient turf. It may be established by seed, plugs, or sod. Even without mowing, plants are very short height (6-8 inches). Buffalograss begins growth in mid to late May and begins to go dormant with the first frost. It has a light green color and fine textured leaves. It grows best in full sunlight and is adapted to a wide range of soil types. It has a higher resistance to drought stress than cool-season turfgrasses.

NaTurf brand BOWIE - Bowie is a widely adapted variety that exhibits quality vegetative characteristics. It has low growth habit and a medium green color. Bowie has a course to medium leaf texture. It has shown good disease tolerance to Leaf Spot and Dollar Spot and has good tolerance to the Buffalograss Mite. It has excellent vigor and establishes quickly with excellent drought tolerance to resist going dormant under drought conditions. Bowie was developed through the cooperative efforts of the Native Turfgrass Group and the University of Nebraska. Seed of Bowie is produced and marketed exclusively under the direction of the Native Turfgrass Group. Unauthorized production and sale of seed is illegal. U.S. Protected Variety U.S. Protected Variety (PVPA 1994). Certificate No. 200100201.

NaTurf brand CODY - Cody is a widely adapted, versatile turfgrass variety. It has low-growing plants which green up earlier in the spring and have a darker green color than most other buffalograss cultivars. It has a medium green color with excellent density and texture qualities. Once established and properly managed, Cody maintains a high quality turf throughout the summer. Excellent vigor and a good spread rate help it establish quickly. Cody was developed cooperatively by the members of the Native Turfgrass Group and the Nebraska Agricultural Research Division. Seed of Cody is produced and marketed exclusively under the direction of the Native Turfgrass Group. Unauthorized production and sale of seed is illegal. U.S. Protected Variety (PVPA 1994). Certificate No. 9600125.

PERENNIAL FORAGE GRASSES

Big Bluestem is a native warm-season, sod-forming grass which grows rapidly from mid-spring to early fall. Plants are tall (6+ ft) and robust. It is highly palatable even after maturity and is a high producer of nutritious forage and hay. Big bluestem is adapted statewide for range seedling on subirrigated sites and for irrigated pasture in mixed or pure stands. In eastern Nebraska, it is adapted on silty and clay sites.

BONANZA - Bonanza is a synthetic variety developed by three generations of breeding for improved forage yield and forage digestibility. It produces good forage yields with high digestibility that results in improved animal gains when utilized by beef cattle in well managed grazing systems. Bonanza is earlier in maturity than Kaw, similar in maturity to Pawnee, and later in maturity than Rountree. U.S. Plant Variety Protection Applied For. Certificate No. 200600049. Bonanza can only be sold as certified seed.

PAWNEE - Pawnee is a synthetic variety developed from accessions collected in Pawnee county Nebraska in cooperation with the USDA-ARS. It is a late maturing grass and heads in late July to early August. It is a widely adapted, typical big bluestem of the central prairies.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		29

Little Bluestem is a native, warm-season bunchgrass which grows rapidly from mid June to early August. Plants are medium height (3+ feet) and well tillered. It has good forage value when leaves are tender and succulent, but palatability is only moderate for fall grazing. Little bluestem is adapted statewide for use in warm-season mixtures and pure stands on most soils and sites. It is not as drought tolerant as blue grama.

ALDOUS - Aldous was selected by the Soil Conservation Service in cooperation with Kansas from native Flint Hills ecotypes. It is a very late maturing grass up to a week later than Camper. Plants are taller than other adapted varieties with good vigor.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	402-867-3771		26

BLAZE - Blaze is a synthetic variety developed from ecotypes collected in Nebraska and Kansas. It is a late maturing grass, intermediate to Camper and Aldous. It is leafy, vigorous, and well adapted to the eastern half of Nebraska and adjacent areas.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	402-867-3771		68

CAMPER - Camper is a synthetic variety produced by crossing two unrelated strains developed from original prairie sources by the USDA-ARS and Nebraska. It is a moderately late maturing grass, similar in maturity to Pawnee big bluestem. The combination of earlier maturity and diverse parentage provides wide adaptation.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	C & H Mills Farm	Murdock	402-867-2956		12
	Stock Seed Farm	Murdock	402-867-3771		48

CIMARRON - Cimarron is a tall, leafy composite of many strains of little bluestem from southwest Kansas, Colorado, New Mexico, Texas, and Oklahoma. Being a composite, it exhibits great variability in plant types. Cimarron grows from 2 to 4 feet in height and performs well in all kinds of soils and in limited areas of precipitation.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Co.	Broken Bow	308-872-6826		15

Sand Bluestem is a native warm-season, sod-forming grass which is highly palatable and has good forage value throughout the year. Plants are tall (6+ feet) and robust. It is adapted throughout Nebraska for sand and loamy range sites and has a long growing season similar to big bluestem. It has very good grazing tolerance.

GOLDSTRIKE - Goldstrike is a synthetic variety developed through crossing western Nebraska Sandhills ecotypes with related strains by the USDA-ARS and Nebraska. It is a moderately late maturing grass and is well adapted throughout the central Great Plains.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		43

Bromegrass is an introduced cool-season, sod-forming grass which produces abundant forage in the spring and late summer for hay and pasture. It is widely adapted to eastern and central Nebraska and responds to intensive management practices. It is an early maturing grass and has moderate tolerance to drought and grazing.

PVP CACHE - Cache meadow bromegrass is recommended for use on irrigated and semi-irrigated pastures for forage production. It has increased forage yield, total seed yield, and seedling emergence. It produced significantly more dry matter forage than cultivars Regar and Fleet meadow bromegrass, Paiute orchardgrass, and Manchar smooth bromegrass. Under limited irrigation, Cache meadow bromegrass produced significantly more dry matter than the cultivars Fleet and Regar. Cache is similar to Regar in establishment and persistence but significantly better than Fleet. U.S. Protected Variety (PVP 1994). Certificate No. 200500277. Cache can only be sold as a class of certified seed.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826	40	

Sideoats Grama is a native warm-season, mildly sod-forming grass which grows rapidly in late spring and may stay green into late summer. Plants are medium height (3+ feet) and well tillered. Forage value and hay quality are good but low in yield. Drought tolerance is good. Sideoats grama is well adapted for use in native grass mixtures throughout Nebraska.

BUTTE - Butte is a variety selected by the USDA-ARS and Nebraska for superior seedling vigor and establishment from native Nebraska ecotypes. It is a medium (mid-summer) maturity grass, somewhat earlier than Trailway. It is widely adapted, especially for those areas with relatively short growing seasons.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826	4	33

EL RENO - El Reno is a variety selected by the Soil Conservation Service and Kansas from native Oklahoma ecotypes. It is a moderately late maturity grass somewhat later than Trailway. It was selected for leafiness, forage production, and vigor.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	C & H Mills Farm	Murdock	402-867-2956	15	

Indiangrass is a native warm-season, sod-forming species which provides palatable forage and hay, nearly equal to big bluestem in quality. Plants are 6+ feet and robust. It is well adapted throughout Nebraska for most soils and sites, for use in range or pasture seedings in pure stands, and in mixtures with other tall warm-season grasses.

HOLT - Holt was selected from native ecotypes collected in Holt county by the USDA-ARS and Nebraska. It is a moderately late maturing grass, somewhat earlier than most indiangrass varieties. It has superior forage production for its maturity.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		32

NEBRASKA 54 - Nebraska 54 was selected from native ecotypes collected in Jefferson county by Harold Hummel and released by Nebraska. It is a late maturing grass and is a few days earlier than Oto. Nebraska 54 is typical of central plains ecotypes.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Cass	Stock Seed Farm	Murdock	402-867-3771		10

SCOUT - Scout was developed by the Agricultural Research Service, USDA, and Institute of Agricultural Sciences and Natural Resources at the University of Nebraska. Scout is adapted to a wide range of the Great Plains and Midwest. It was developed due to a need for an Indiangrass with similar adaptation to NE 54, but with improved forage yield and digestibility. In trials with other Indiangrass cultivars, Scout has significantly better hay and forage yields along with high in vitro dry matter digestibility, giving better animal gains in beef cattle when used in well managed grazing systems. Scout has also shown exceptional first year establishment and vigorous growth.

Cass	Stock Seed Farm	Murdock	402-867-3771		13

Switchgrass is a native warm-season, sod-forming grass which grows rapidly in late spring and early summer. On adapted sites, it has high yield of good quality hay and forage if cut or grazed early. On fall and winter range, palatability is low. Plants are moderately tall (5+ ft), very well tillered, and robust. It is well adapted for use throughout the Great Plains for conservation plantings or in warm-season pastures. Most cultivars are susceptible to stem rust. In some years forage quality and seed yield may be affected.

TRAILBLAZER - Trailblazer is the result of a basic genetic study designed to improve forage quality. It is a 25 clone synthetic variety similar to Pathfinder in maturity, appearance, and area of adaptation. It was developed by Nebraska and the USDA-ARS.

COUNTY	GROWER	TOWN	TELEPHONE	REG	CERT
Custer	Arrow Seed Company	Broken Bow	308-872-6826		23

Intermediate Wheatgrass is a moderately late maturing, cool-season, sod-forming grass that produces excellent quality forage for hay or grazing in the late spring, early summer and fall. It is well adapted to all Major Land Resource Areas in Nebraska. Intermediate wheatgrass is more drought tolerant than smooth brome but less tolerant than crested wheatgrass. Plants are medium height (4+ feet), well tillered, and robust.

PVP BEEFMAKER - Beefmaker is an excellent intermediate wheatgrass for grazing. The in vitro dry matter digestibility (IVDMD) rating is one to two percentage points higher than other released wheatgrasses. Plant height for Beefmaker is 42.5 inches. The head length is 9.9 inches, and head width is 3.7 inches. The flag leaf is located approximately 30.9 inches from the ground. Beefmaker was developed by USDA-ARS and the University of Nebraska. U.S. Protected Variety (PVP 1994). Certificate No. 200400232. Beefmaker can only be sold as a class of certified seed.

NCIA Seed Laboratory

NCIA is the only **Official** AOSA Seed Testing Laboratory in Nebraska. NCIA's laboratory offers rapid turn-around of your samples and reliable results.

Seed Testing Services include: Purity Analysis, Germinations, AOSA or ISTA methods, Tetrazolium Viability, Vigor Assessments, Herbicide Resistance testing, Treated Seed Evaluation, Moisture, Seed Counts, Test Wt, and Seed Identifications. We also offer online results of your seed test. Check out the NCIA website for more information on services and prices. www.necrop.org

APPROVED SEED CONDITIONERS

An active APPROVED SEED CONDITIONER system is very important and an integral part of Nebraska's certification program. Approved Conditioners are seed cleaning firms who are authorized by the Board of Directors to purchase field-approved seed and move it to their plants for conditioning, submit samples for testing, order tags or certificates, and merchandise the finished product on a retail basis.

The objectives of the Approved Conditioner program are:

1. To expand the marketing options of seed producers who may not have adequate cleaning or merchandising facilities.
2. To provide the retail seed trade with reliable high quality sources of seed.
3. To improve the quality of seed available, while insuring maintenance of varietal purity.
4. To promote acceptance and use of Nebraska certified seed.

CUSTOM CERTIFIED CONDITIONERS

The function of the Custom Certified Conditioner is solely to provide seed cleaning and handling services—services which prepare certifiable seed produced by members from inspected acres for marketing channels.

Seed conditioners in this category voluntarily request inspection by the Association to provide quality assurance for the seed producer and seed consumer. Custom Certified Conditioners are subject to minimal procedural and equipment guidelines.

The objectives of the Custom Certified Conditioner program are:

1. To provide necessary conditioning services for seed producers and merchandisers who do not have adequate cleaning facilities.
2. To improve the quality of seed available while insuring maintenance of varietal purity.
3. To promote acceptance and use of Nebraska certified seed.

2017 NCIA MEMBERS

Grower (GR) – A member who applies for field inspection services and used the services of either Custom or Approved Conditioners to prepare seed for marketing channels.

Grower-Conditioner (GC) – A member who applies for field inspection services and has adequate facilities for conditioning his own seed produced from inspected acres in preparation for marketing channels.

Custom Certified Conditioner (CC) – A member who may or may not apply for field inspection services and has adequate facilities for conditioning seed produced from inspected acres (by himself or other members) in preparation for sale in marketing channels.

Approved Seed Conditioner (AC) – A member who may or may not apply for field inspection services, has adequate facilities for conditioning seed, and may purchase bulk uncleaned seed from inspected acres of a crop grown by another member for conditioning, tagging, and sale in marketing channels as a class of certified seed.

Associate Member (AM) – Any other person, partnership, or corporation who would not be involved directly in the production, conditioning, or marketing of seed but is interested in furthering the goals of the Association may become a non-voting member.
